EDITORIAL

135 The Overuse of Cesarean Delivery
A brief review of recent publications highlighting the maternal and infant issues surrounding the overuse of cesarean in contemporary obstetrical practice.
Nancy K. Lowe

LETTER

137 The Value of Joining Forces
Mary Ann Stark

CASE REPORT

138 A Case Study of Maternal Response to the Implied Antepartum Diagnosis of Inevitable Labor Dystocia
Despite recommendations to schedule cesarean delivery, these two women had uncomplicated vaginal births by finding different providers and maintaining control of their own labors and births.
Barbara S. McAlister

RESEARCH

148 Understanding the Moral Nature of Intrapartum Nursing
Nurses’ responsibilities to laboring women were organizing and coordinating care, responding to the unpredictable, recognizing limits of responsibilities to others, and negotiating care with women and their families.
Anne H. Simmons, Elizabeth Peter, Ellen D. Hosbnett, and Linda McGillis Hall

157 A Resilience Perspective of Postpartum Depressive Symptomatology in Military Wives
Military wives with depressive symptoms had greater family changes and strains, lower self-reliance, and lower social support than those without depressive symptoms.
Kathleen Schachman and Lee Lindsey

168 Treatment-Seeking Behaviors and Attitudes Survey among Women at Risk for Perinatal Depression or Anxiety
Women with depressive or anxiety symptoms consulted friends and families about their symptoms more frequently than health care professionals and were unlikely to receive treatment.
Erin Henshaw, Bethany Sabourin, and Melanie Warning

178 Clinical Determinants of Parents' Emotional Reactions to the Disclosure of a Diagnosis of Congenital Anomaly
There were no differences between mothers and fathers in their emotional response. Type of anomaly, time of diagnosis, and parity were unrelated to emotional response.
Ana Fonseca, Bárbara Nazaré, and Maria Cristina Canavarro

191 Self-Efficacy in Pregnant Women with Severe Fear of Childbirth
Qualitative data from interviews of nulliparous women with severe fear of childbirth suggest areas for expansion of the theoretical components of childbirth self-efficacy.
Birgitta Salomonsson, Carina Berterö, and Siv Alehagen

203 Randomized, Controlled Trial Evaluating a Baby Wash Product on Skin Barrier Function in Healthy, Term Neonates
Transdermal water loss at 14 days of age was no different between infants bathed with a commercial wash product and those bathed with water alone.
Tina Lavender, Carol Bedwell, Stephen A. Roberts, Anna Hart, Mark A. Turner, Lesley-Anne Carter, and Michael J. Cork

On Our Cover:

Military wives with depressive symptoms had greater family changes and strains, lower self-reliance, and lower social support than those without depressive symptoms.
